SUMMARY

Full-Stack & Quant Engineer who builds live trading systems end-to-end and keeps them running — tick-level market data, strategy and backtesting engines, automated broker execution, streaming charts, and the aws infrastructure underneath. Lead engineer on MarketForecaster, AlgoSync and TickPro, each taken from prototype to a live product used by elite traders. Now running Aarohan Enterprises, shipping independent products to the Chrome Web Store and the Microsoft Store.

EXPERIENCE

Aarohan Enterprises

Dec 2025 – Present

Proprietor

- GroupSync and Sandesh — two Chrome extensions for WhatsApp: GroupSync exports group member lists to CSV, Excel or vCard, live on the Chrome Web Store with pay-per-export Razorpay/PayPal checkout and serverless billing on Lambda and DynamoDB; Sandesh messages every member of a group one-to-one, uploading media once and fanning it out through batched forwards.
- Meridian — published a Flutter world clock for Windows to the Microsoft Store: DST-aware IANA timezones, an SNTP client that reports how far the PC clock has drifted, and a frameless always-on-top overlay; packaged as MSIX and taken through Store certification.
- AI marketing generator — a scheduled Lambda that plans a client's day from a content calendar, generates a Hindi marketing poster with Gemini and emails it to their team; running every morning since August 2026.

Secret Weapons Trading Solutions Pvt. Ltd.

Remote | Jun 2025 – Aug 2026

Software Engineer

- Lead engineer on MarketForecaster, a live algorithmic trading platform — built full-stack across Python/FastAPI services, a Next.js streaming-chart front end, Keycloak auth and a TimescaleDB market-data store — from prototype to a multi-user product.
- Shipped multiple trading strategies and indicators, and made backtests match live trading exactly, replacing a legacy setup where the two disagreed on most trades.
- Compiled the strategy engine's hot paths with Numba njit — backtests dropped from minutes to under a second.
- Took ownership of AlgoSync, the broker execution service, and automated live execution on Tradovate prop accounts, where no vendor API access is available to end users — order routing, fill and position tracking, reconciliation against the broker, and live P&L with one-tap exit.
- Ran the entire production estate single-handedly — 12 AWS servers, Redis, TimescaleDB, CI/CD across 8 repositories, TLS, backups, security hardening and automated monitoring.
- Cut market-data processing load by 88% and halved the cloud bill (\$67 → \$30/day) by rebuilding the ingestion pipeline, with no loss of speed or uptime.
- Owned TickPro, a desktop market-analytics product, from architecture to release — 9 proprietary signal engines, voice alerting, licensed distribution to approved users.
- Built a Level-2 order-book data service delivering packaged daily market sessions through a secure customer portal.
- Built an AI ops agent that monitors the production stack — reviewing server health, logs and cloud spend across the fleet daily, running backups and cleanup, and reporting to Slack in place of manual checks.

PineCoder.in

Remote | Jul 2024 – May 2025

Founder & Freelance Developer

- Designed and shipped custom Pine Script strategies and indicators for paying clients, deeply optimised against historical data to improve realised returns.
- Took strategies from backtest to live trading, routing TradingView webhook alerts into broker APIs for automated real-money order execution.
- Built an order-book analytics platform for depth, liquidity, and market-microstructure analysis to support strategy research.
- Built and hosted real-time, multi-timeframe volatility screeners over live WebSocket feeds.

Algoji Enterprises Pvt. Ltd.

Remote | Jan 2024 – Jun 2024

Strategy Developer Intern

- Re-engineered API Bridge's master-symbol generation with multiprocessing, sharply reducing latency under high volume.
- Built real-time AmiBroker feeds from broker APIs (Finvasia/Shoonya, Symphony XTS) via an ODBC/MySQL pipeline with NSE/NFO/BSE/MCX mapping.
- Developed a Python XTS charting/trade-tracking app, live quote-to-Excel feeds, and an auto-updater for broker contract files.
- Automated derivatives execution (option chain, Greeks, SPAN margin) and order routing from TradingView to brokers; authored Pine Script strategies.

Solar Industries India Ltd.

Nagpur | Oct 2022 – Apr 2023

Data Analyst Intern

- Drove supply-chain and production analytics with time-series demand forecasting and Python/Tableau dashboards for executive insights.
- Led a computer-vision project to monitor production output and stock levels and enforce safety compliance, annotating datasets with Labelling and training YOLO object-detection models.

INDEPENDENT PROJECTS

AlertSync (alertsync.in) — Full-Stack Alert Automation SaaS

- Built a TradingView-to-Telegram alert-relay SaaS (FastAPI, Next.js, Keycloak) with Redis-backed multi-tenant quota and state management.
- Integrated Razorpay billing with dual one-time and auto-renew subscription checkout, HMAC signature verification, and idempotent webhook handling.

PDF2.in (pdf2.in) — Browser-First PDF Toolkit

- Built 20+ privacy-first PDF tools (merge, split, compress, redact, watermark, sign, OCR, format conversion) in a Next.js 14 app — processing files client-side via pdf-lib/pdf.js, with a lightweight FastAPI backend deployed via Docker/CI-CD.

TECHNICAL SKILLS

Backend & Infrastructure: Python, FastAPI, REST APIs, Microservices, Redis (Streams & Pub/Sub), PostgreSQL, TimescaleDB, InfluxDB, Docker, Keycloak, NGINX, Linux

Frontend: Next.js, React, TypeScript, JavaScript, Electron, Flutter/Dart, Chrome Extensions (MV3), Socket.IO, WebSockets, Lightweight Charts, Event-driven Micro-frontends

Cloud & DevOps: AWS (EC2, Lambda, API Gateway, DynamoDB, S3, CloudFront, EventBridge, ElastiCache, IAM), Cloudflare, GitHub Actions (OIDC), CI/CD, Certbot/TLS, fail2ban/UFW, Cost Optimization, AWS Graviton

Quant & Trading Systems: Real-time Market Data Pipelines, Strategy Development, Backtesting, Strategy Optimisation, Technical Indicators, Order-Book Analytics, Market Microstructure, Pine Script, TradingView, Numba JIT, Vectorization, Performance Profiling, Order Execution & Broker APIs, Tradovate, Level-2 / Order-Book Data

Data Science & ML: Pandas, NumPy, Scikit-learn, Time Series Forecasting, Statistical Modeling, Feature Engineering, EDA, Data Visualization, LLM APIs (Gemini, Claude)

EDUCATION

B.Tech, Computer Science & Engineering

2020 – 2024

Shri Ramdeobaba College of Engineering and Management, Nagpur — Specialization in Artificial Intelligence and Machine Learning
